

Participants may receive a maximum of 2.0 *AMA PRA Category 1 Credits™* by reading each CME article and correctly answering at least 70% of the questions in the Posttest.

To take this Posttest online and earn credit immediately, go to PSYCHIATRIST.COM, Keyword: July.

Or, take the Posttest and send the completed Registration form to the address or fax number listed on the form.

Unanswered questions will be considered incorrect and so scored. Answer sheets, once graded, will not be returned. All replies and results are confidential. The CME Institute of Physicians Postgraduate Press, Inc., will keep only a record of participation, which indicates that you completed the activity and the number of *AMA PRA Category 1 Credits* you have been awarded. Correct answers to the Posttest will be available upon request after the submission deadline.

Accreditation Statement

The CME Institute of Physicians Postgraduate Press, Inc., is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians.

Chaudieu et al

pp 929–935

1. Subjects who reported more traumatic events were ____ than 75 years old, and reexperiencing symptoms were more common in ____ .
 - a. Younger; men
 - b. Older; men
 - c. Younger; women
 - d. Older; women
2. Mr A, Mr B, and Mr C have been friends for 50 years. Mr A and Mr B are combat veterans who experienced trauma. Mr A has reexperiencing symptoms. Mr C has not experienced trauma. According to these study results, which of the following statements is *true*?
 - a. The risk of current major depressive disorder (MDD) is the same in all 3 men
 - b. Mr A is most likely to have current MDD
 - c. Mr C is least likely to have current MDD
 - d. Current MDD in Mr A or Mr B would not be related to trauma because the traumatic events happened over 40 years ago
3. Which feature of physical health was associated with exposure to trauma regardless of the presence of reexperiencing symptoms?
 - a. Angina pectoris
 - b. Higher waist-to-hip ratio
 - c. Elevated triglycerides
 - d. Hypertension

Volavka et al

pp 955–961

4. Mr D is experiencing his first episode of schizophrenia and is angry and extremely uncooperative. You are considering antipsychotic treatment options. Which agents are likely to provide the greatest decrease in hostility, according to the Positive and Negative Syndrome Scale, during the first month of treatment?
 - a. Ziprasidone and haloperidol
 - b. Quetiapine and ziprasidone
 - c. Olanzapine and ziprasidone
 - d. Olanzapine and amisulpride
5. The statistically significant differences in hostility scores found between treatment groups at month 1 ____ .
 - a. Remained statistically significant through month 12
 - b. Remained statistically significant through month 9
 - c. Remained statistically significant through month 3
 - d. Did not continue past month 1
6. A limitation of this study is that ____ .
 - a. The sample had low baseline levels of hostility
 - b. The sample had first-episode rather than long-term schizophrenia spectrum disorders
 - c. Several first-generation antipsychotics were aggregated for comparison against individual second-generation antipsychotics
 - d. The relationship between the decreases in hostility and the reduction of other positive symptoms was not examined

Answers to Pretest: 1. a 2. c

REGISTRATION FORM

Circle the one correct answer for each question.

1. a b c d
2. a b c d
3. a b c d
4. a b c d
5. a b c d
6. a b c d

Deadline for submission

For a credit certificate to be issued, please complete this Registration Form no later than July 31, 2014. Online submissions will receive credit certificates immediately. Faxed or mailed submissions will receive credit certificates within 6 to 8 weeks.
