Correction

In the article “Continuation of Quetiapine Versus Switching to Placebo or Lithium for Maintenance Treatment of Bipolar I Disorder (Trial 144: A Randomized Controlled Study)” by Richard H. Weisler, MD, and colleagues in the November 2011 issue (*J Clin Psychiatry* 2011;72[11]:1452–1464), in Figure 2 on page 1456, the number of patients randomized to quetiapine who discontinued due to mood event should be $n = 87$.

The staff regret the error. The online article at PSYCHIATRIST.COM has been corrected.
